

Dux SecuraGold™ system offers the most extensive Polybutene-1 piping system in New Zealand and Australia with 4 diameters (12mm, 15mm, 20mm, 28mm) and an extensive range of fittings to choose from. SecuraGold™ 12mm adds a new dimension and presents a number of new opportunities and benefits for the professional Plumber. With consumers growing awareness for water and energy conservation, SecuraGold's 12mm range can assist in saving our valuable resources from wastage.

Why use 12mm?

- An efficient and cost effective alternative to 15mm applications
- Greatest level of energy and water conservation than other diameters with the reduction of water draw off
- Greater flexibility, therefore, easier handling through framing, trusses and tight spaces.
- Less effort is required to crimp 12mm SecuraGold™ joints.
- A single 30mm hole in framing will replace 2 x 20mm holes
- Combined with SecuraGold™ manifolds in 'point to point' plumbing 12mm, SecuraGold™ speeds installation, as the system requires less joints.
- SecuraGold™ 12mm with its nominal 10mm internal bore enables plumbers to comply with the efficiency requirements of NZS 4305:1996
- SecuraGold™ 12mm complies with the current requirements of AS/NZS 3500 and the New Zealand Building Code.

Dux guarantees all installations* including alternative PB-1 pipe when used with SecuraGold fittings

* Alternative pipe must be installed in accordance with the manufacturers installation instructions and the requirements of relevant AS/NZ Standards and meet the durability requirements of the New Zealand Building Code
